

1. Write a program to input electricity unit charges and calculate total electricity bill according to the given condition:

For first 50 units Rs. 0.50/unit

For next 100 units Rs. 0.75/unit

For next 100 units Rs. 1.20/unit

For unit above 250 Rs. 1.50/unit

An additional surcharge of 20% is added to the bill

2. Write a program to check whether the last digit of a number (entered by user) is divisible by 3 or not.

3. Write a program to display "Hello" if a number entered by user is a multiple of 5 and 7, otherwise print "Bye".

4. A company decided to give bonus to employee according to following criteria:

Period of Service	Bonus
More than 10 years	10%
≥ 6 and ≤ 10	8%
Less than 6 years	5%

Ask user for their salary and years of service and print the net bonus amount.

5. Write a python program that takes a number.

If the number is divisible by 3, it should return "Fizz".

If it is divisible by 5, it should return "Buzz".

If it is divisible by both 3 and 5, it should return "FizzBuzz".

Otherwise, it should return the same number.

6. Write a program for checking the speed of drivers..

1. If speed is less than 70, it should print "Ok".

2. Otherwise, for every 5km above the speed limit (70), it should give the driver one demerit point and print the total number of demerit points. For example, if the speed is 80, it should print: "Points: 2".

3. If the driver gets more than 12 points, it should print: "License suspended"

7. A year is a leap year if it is divisible by 4, except that years divisible by 100 are not leap years unless they are also divisible by 400. Write a program that asks the user for a year and prints out whether it is a leap year or not.

8. Write a program to input marks of five subjects Physics, Chemistry, Biology, Mathematics and Computer. Calculate percentage and grade according to following:

Percentage $\geq 90\%$: Grade A

Percentage $\geq 80\%$: Grade B

Percentage $\geq 70\%$: Grade C

Percentage $\geq 60\%$: Grade D

Percentage $\geq 40\%$: Grade E

9. Write a program to check whether the triangle is equilateral, isosceles or scalene triangle.

10. Write a program that calculates the ticket price based on age with the following conditions: age below 12 pay a ticket price of 5, age below 18 pay a ticket price of 10, age below 60 pay a ticket price of 20, age over 60 pay a ticket price of 15.

11. An automobile company manufactures both a two wheeler (TW) and a four wheeler (FW). A company manager wants to make the production of both types of vehicle according to the given data below:

1st data, Total number of vehicle (two-wheeler + four-wheeler)=v

2nd data, Total number of wheels = W

The task is to find how many two-wheelers as well as four-wheelers need to manufacture .

Example :

Input :

200 -> Value of V

540 -> Value of W

Output :

TW =130 FW=70
